I am writing this email as a concerned citizen of Whittier, and of our county in general. Global warming is real and we need to build UP the canopy of trees by PLANTING MORE TREES, not REMOVING the few we have!! Less trees means less shade to offset the effects of pavement taking in heat and causing heat to be trapped during the hot summers. We would also have less trees to help clean the air in our over polluted cities. Don't cut them down! It would be extremely detrimental to everyone's health and the health of future generations.
